# What are R and RStudio?

## Introduction to R and RStudio

**R** is a widely used, free software language and environment for statistical computing and graphics. Learn more here.

**RStudio** is a free, integrated development environment for R.

For this course, we will be using a custom R package called **SDSFoundations**. You can find this package - and directions on its installation - on the following "Mac Users" and "Windows Users" unit components as well as on the "Download R and RStudio" page.

## Tutorials

Throughout the course, we will upload R Tutorial videos to both the weekly instruction units as well as to the R and RStudio Tutorials page.
